What Makes Us Different

There are numerous environmental firms vying for your business in today’s marketplace. However, we believe that we differ from most firms in the following key areas:

- **The Depth of Our Technical Expertise.** Our staff is composed of experienced field Technicians as well as professionals certified, accredited, and/or licensed in several technical fields including Certified Industrial Hygienists (CIH), licensed Asbestos Consultants, Lead Risk Assessors, Mold Assessment Consultants, Registered Environmental Managers (REM), and Certified Safety Professionals (CSP).
- **The Range of Our Capabilities.** We have a broad range of in-house Environmental, Health, and Safety (EHS) capabilities designed to meet the needs of industrial and manufacturing clients as well as commercial, government, and public entities. These include the operation of our own licensed and accredited laboratory for the analysis of asbestos.
- **Our Ability to Respond Quickly.** With a field staff of over 50 Field Technicians operating out of 2 locations, we can be there when you need us. We understand the need to respond quickly and maintain our own State-accredited training facilities to assure the availability of field personnel with a consistent level of experience and training.
- **We Know How to Work Safely.** Our safety record is one of the best in the industry allowing us to meet the strict operating criteria of most industrial and government facilities. We maintain an EMR below 1.0 with ZERO Lost Time Incidents over the past 15 years.
